

The MMUISD Gait Database, Inertial Sensor Dataset

Introduction

The MMUISD Gait Database is collected for the purpose to aid research efforts in the general area of developing, testing and evaluating algorithms for gait-based human identification. The Faculty of Information Science and Technology, Multimedia University has copyright in the collection of gait associated data and serves as a distributor of the MMUISD Gait Database.

Release of the Database

This database could be downloaded as a zip file with password. To receive the password, the requestor must sign this document and send it to the authors by e-mail. In addition to other possible remedies, failure to observe these restrictions may result in access being denied for the database.

Consent

The researcher(s) agrees to the following restrictions on the MMUISD Gait Database:

Redistribution: Without prior written approval from the authors, the MMUISD Gait Database, in whole or in part, will not be further distributed, published, copied, or disseminated in any way or form whatsoever, whether for profit or not. This includes further distributing, copying or disseminating to a different facility or organizational unit in the requesting university, organization, or company.

Modification and Commercial Use: The MMUISD Gait Database, in whole or in part, may not be modified or used for commercial purposes.

Requests for the MMUISD Gait Database: All requests for the MMUISD Gait Database will be forwarded to the authors.

Publication Requirements: Those seeking to include inertial signal sequence from the MMUISD Gait Database in reports, papers, and other documents to be published or released must first obtain approval in writing from the authors.

Citation/Reference: All documents and papers that report on research that uses the MMUISD Gait Database will acknowledge the use of the database by including an appropriate citation to the following:

Permatasari J., Connie T., Song O.T. (2020) The MMUISD Gait Database and Performance Evaluation Compared to Public Inertial Sensor Gait Databases. In: Alfred R., Lim Y., Havaluddin H., On C. (eds) Computational Science and Technology. Lecture Notes in Electrical Engineering, vol 603. Springer, Singapore

Publications to Multimedia University: A copy of all reports and papers that are for public or general release that use the database should be forwarded immediately upon release or publication to the authors.

Indemnification: Researcher agrees to indemnify, defend, and hold harmless the Faculty of Information Science and Technology, Multimedia University and its Board of Trustees, officers, employees and agents, individually and collectively, from any and all losses, expenses, damages, demands and/or claims based upon any such injury or damage (real or alleged) and shall pay all damages, claims, judgments or expenses resulting from researcher's use of the database.
